TO CONVINCE MORE PHYSICIANS

On Saturday, May 4, 1912, an invitation was extended to the physicians of San Francisco through the Evening Bulletin and Evening Post to check up the results in a case of Diabetes alleged to be incurable by the books.

Four years ago one of the best San Francisco hospitals failed in the case. When the patient got so weak he could hardly walk they told him dieting was all that could be done. He took Fulton's Diabetic Compound and recovered, and has been actively in business ever since. Recently the symptoms returned. His physician reported sugar, and that the Diabetes was on him again. We told him we had known it to be controlled the second time. He started again on the Diabetic Compound. In order that doubters might be convinced we made arrangements for physicians who believe Diabetes incurable to have samples and gave them his address and invited them through the Bulletin and Post to make their own tests week by week, so that they could see the sugar disappear.

What does this mean if results cannot be had in these cases? It is cruel to hold patients to failure on Codein (containing opium which locks up secretions) when recoveries are being had by the use of a mild infusion (without sedatives), the motive of which is to help the liver oxidize the sugars and starches. (Recoveries are rare in young people, but in patients past middle life we look for good results as a general rule.)

TELLS OF CRUELTY OF SOUTH SEA POACHERS

NEW YORK, November 16.—That thousands of albatrosses have been imprisoned to die of starvation by Japanese feather poachers in the Hawaiian Islands was told by Dr. Homer R. Dill of the University of Iowa, in an address before the annual meeting of the National Association of Audubon Societies.

He has recently returned from the Pacific and states that these birds each year collect in countless numbers to rear their young on Laysan Island, now a United States bird reservation. They grow fat from inaction and much eating and are easily captured. By placing them in dry cisterns, where no food is available, the fat becomes absorbed by the time the birds die. This makes the skinning easy and the feathers are rendered more salable.

Twenty-three of the agents of the feather trade were captured some time ago and taken to Honolulu for trial. The Audubon Society is planning to protect these birds in future by means of agents.

"The past year we employed about fifty wardens to guard great nesting colonies of water birds throughout North America, and at least two million birds thus dwelt in safety from the millinery hunters," said T. Gilbert Pearson, national Audubon secretary. "There seems to be no limit to which the feather manufacturers will not go in their desire to get bird feathers with which to trim women's hats."

CROUP.

This disease is so dangerous and so rapid in its development that every mother of young children should be prepared for it. It is very risky to wait until the attack of croup appears and then send for medicine and let the child suffer until it can be obtained. Chamberlain's Cough Remedy is prompt and effectual and has never been known to fail in any case. For sale by all dealers. Benson, Smith & Co., Ltd., agents for Hawaii.—advertisement.
